

Healthy cook

By AislinnMyths

Project summary

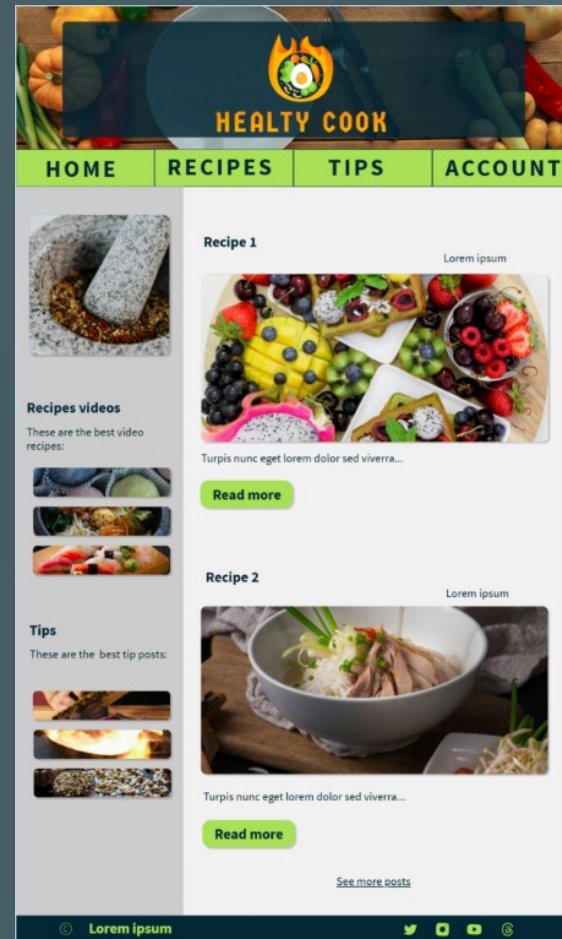

The product:

I create a website and an app to attract customers and build customer loyalty. I create a product that offers certain things that will improve the customer experience and satisfaction.

Duration of the project:

From April to May 2025

Project summary

The problem:

Search and save recipes

The objective:

Create a website and an app
with all the features that will
be good to have.

Project summary

My role:

UX designer in charge of creating a Healthy cook website and the app from conception to delivery.

Responsibilities:

Conducting interviews, paper sketches, prototypes (lo-fi and hi-fi), accessibility and design iteration studies.

Understanding the user

- User research: summary
- User research: weaknesses
- Personas
- Problem statements
- User journey map

User research: summary

I conducted the interviews and made the empathy maps, all to understand the needs of the users. The group of users were of different ages and needs, but with a passion for cooking. These users, through the research, revealed why it was important for them to have a good recipe search and to be able to save recipes. As well as the advantage of having both the app and the website.

User research: weaknesses

1

Time

Would like to be able to search by ingredients, country or difficulty.

2

Influx of people

Many people would like to be able to preserve recipes they love.

Persona: Laura

Problem statement:

Laura is a barista that needs to being able to search the recipies and safe them to make them for her partner.

USER PERSONA 1

LAURA MARTÍN

AGE	27
GENDER	Female
COUNTRY	Spain
EDUCATION	High school
OCUPATION	Barista
CIVIL STATUS	in a relationship

ABOUT

He likes to prepare dishes from many parts of the world that are healthy but different. She usually does this for herself and her partner.

GOALS

- be able to search for recipes by ingredients
- be able to search for recipes by country

FRUSTRATIONS

- not being able to save the pdf of the recipe.

“She likes to look at recipes on internet.”

Persona: Fran

Problem statement:

Fran is a journalist that needs to being able to search the recipiesd and safe them in his account to make them for his friends.

USER PERSONA 2

FRAN LÓPEZ

AGE	35
GENDER	Male
COUNTRY	Spain
EDUCATION	college
OCUPATION	Journalist
CIVIL STATUS	Single

ABOUT

He enjoys cooking for his friends and meeting with them to try new dishes.

GOALS

- be able to search for recipes by ingredients
- be able to search for recipes by difficulty

FRUSTRATIONS

- bookmark the recipe in a personal account

“Get together with his friends and enjoy the recipes he has cooked.”

User journey map

Laura's journey map showed how useful it would be to be able to search for recipes and save them.

Persona: Laura

Goal: Wants to prepare a special dinner for her partner

ACTION	Connect to the web	Search for recipes	Choose the recipe	Buy the ingredients	Action 5
TASK LIST	Tasks A. Turn on the computer. B. Enter the website	Tasks A. Enter the recipes section. B. Search among the recipes for dishes to make the menu	Tasks A. Search for a starters, first courses and main dishes B. Choose the reipes	Tasks A. Go to the supermarket B. Buy the ingredients for the selected recipes	Tasks A. Make the recipies B. set the table and wait for her partner C. Enjoy the food
FEELING ADJECTIVE	Alert	Overwhelmed	Hopeful Excitement	Satisfaction Nervousness	Hopeful Excitement
IMPROVEMENT OPPORTUNITIE S		More filters to search	be able to sort by type		

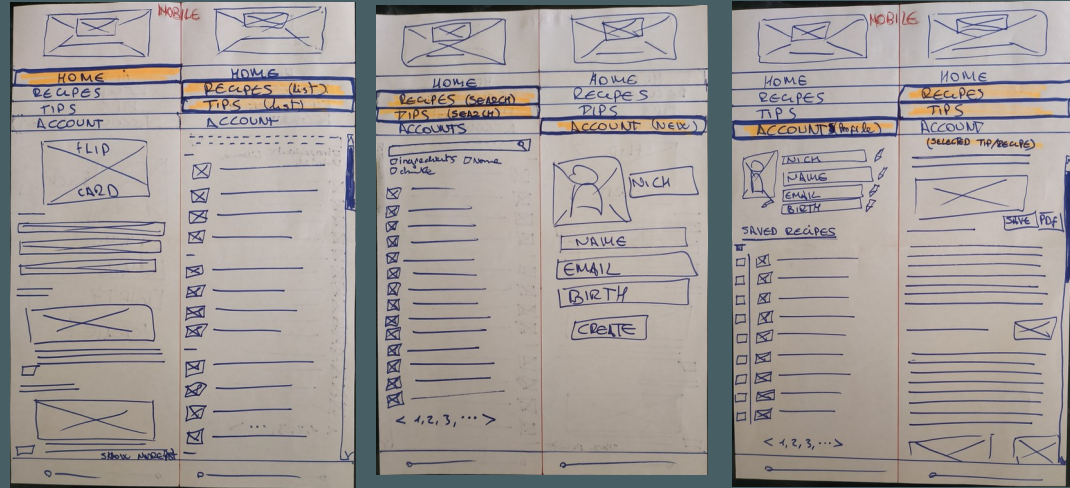

Start the design

- Page sketches on paper
- Digital page layouts
- Low-fidelity prototype
- Usability studies

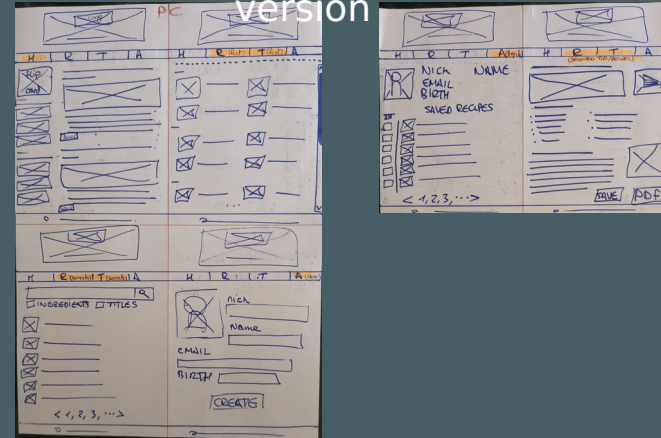

Page sketches on paper

The time it took to do the various iterations on paper for each screen meant that the digital layouts were more accurate afterwards. Simplicity and speed were prioritised to avoid confusion for users.

Mobile version

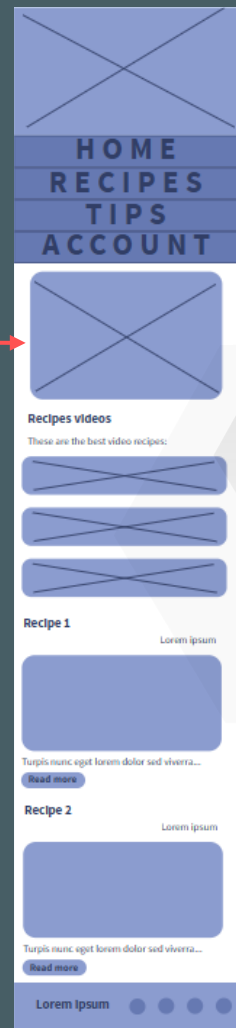

Desktop version

Digital page layouts

I tried to make the homepage simple, but attractive.

Flip card image

main menu

Digital page layouts

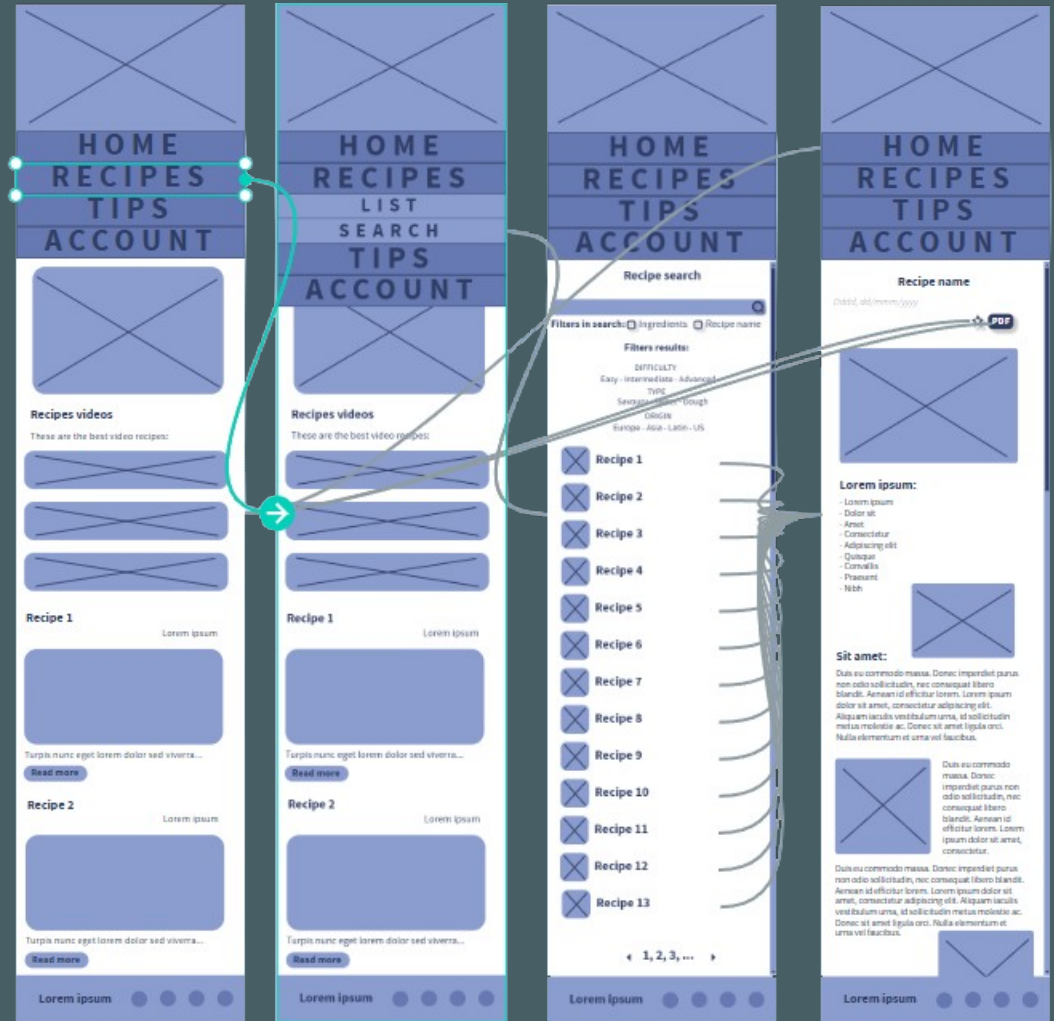

I tried to make the designs based on the results of the user research.

Low-fidelity prototype

I created a lo-fi prototype making use of digital page layouts. The user flow I plugged in was to search and save a recipe.

See the lo-fi prototype here.

Usability study: Findings

Usability studies were carried out to see how well the recipe search and saving works.

Round 1 Discoveries

- 1 Needed search filters
- 2 Needed filters of the elements sought

Round 2 Discoveries

- 1 Needed some more filters of the elements sought
- 2 Aid in certain elements

Refine the design

- Mock-up
- High fidelity prototype
- Accessibility

Mock-up

I put explanatory text to facilitate the process for people for whom it was not intuitive what to do.

Before the usability study

After the usability study

Mock-up

Mobile version

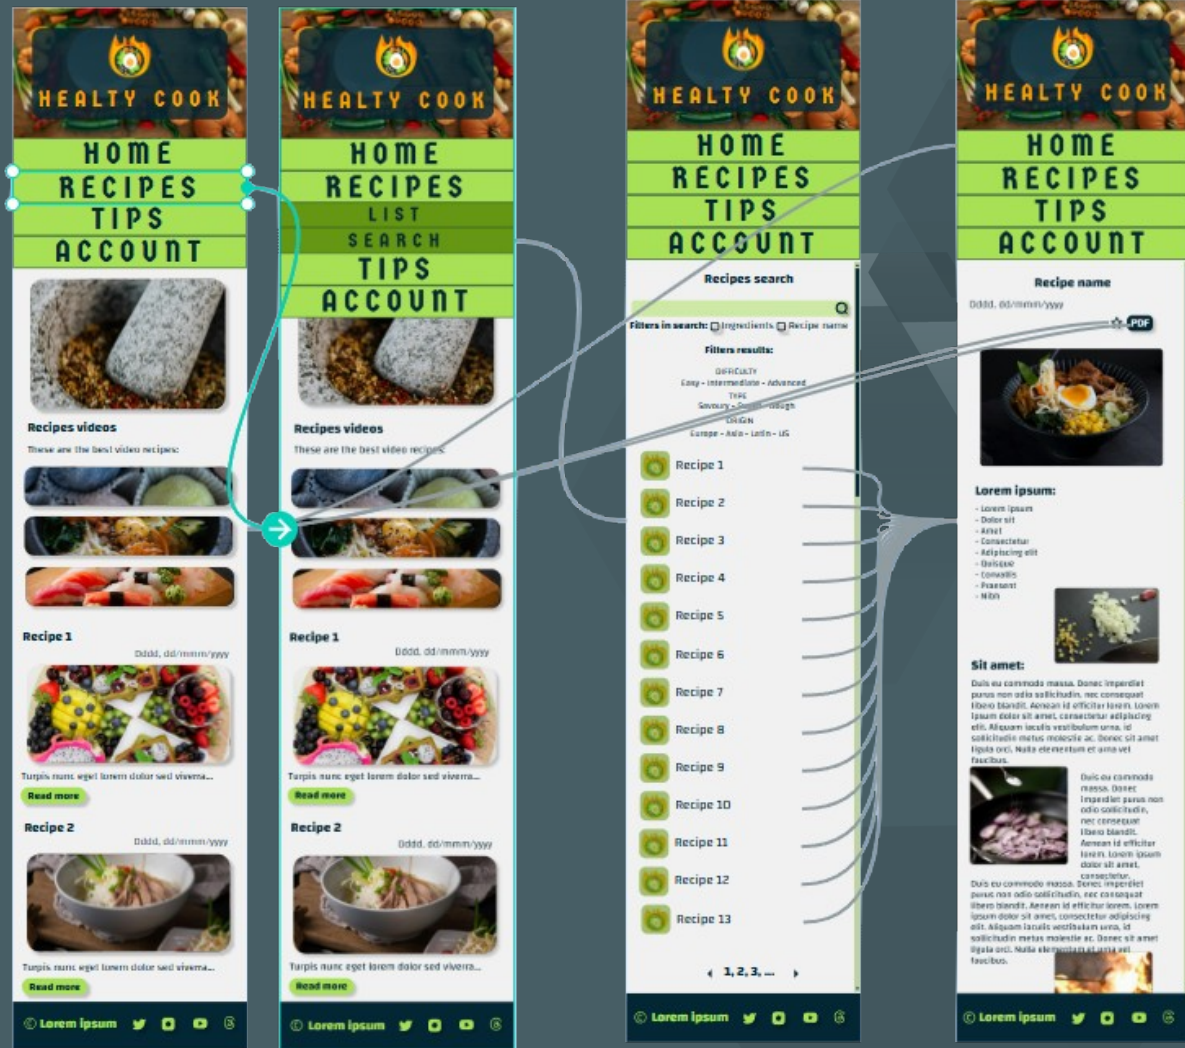

Desktop and Tablet version

High fidelity prototype

The flows of the hi-fi prototype are simple and easy to follow. Making it an enjoyable experience. The user flow I plugged in was to search and save a recipe.

See the hi-fi prototype here.

Accessibility considerations

1

The font used was one that was comfortable for everyone to read.

2

Icons were simplified to make the app easier to navigate, as well as a more minimalist and simple design.

3

Intuitive and minimalist design, for easy navigation

The background of the slide is a solid red color. It is decorated with a pattern of hexagons. On the left side, there are large, semi-transparent red hexagons. On the right side, there is a dense pattern of smaller, outlined white hexagons. A thin black vertical line is positioned to the right of the 'Go to' text.

- Conclusions
- Next steps

Conclusions

Impact:

Having a good recipe search, as well as the option to save the file or save it to your personal account, helps users avoid inconvenience and discomfort.

What I learned:

What one thinks is simple and easy to understand is not always simple and easy to understand for everyone.

You may have ideas that sound great to implement, but as you iterate, you realise that this is not the case.

Next steps

1

Check that users' needs are met

2

Continue iterating and doing usability studies, to refine the final design.

3

Check whether customers would benefit from a dark mode or a colour range for colour blindness.

Let's get in touch!

Thank you for taking the time to review this project. I'll give you my contact information below, in case you need to see more of what I've worked on or get in touch.

Email: talía.dc@proton.me

The background of the slide is a solid red color. It is decorated with a pattern of hexagons. On the left side, there are several large, semi-transparent red hexagons of varying shades. On the right side, there is a dense cluster of smaller hexagons, some of which are outlined in white, creating a complex geometric pattern.

Thanks!
