

Retro cinema

By AislinnMyths

Project summary

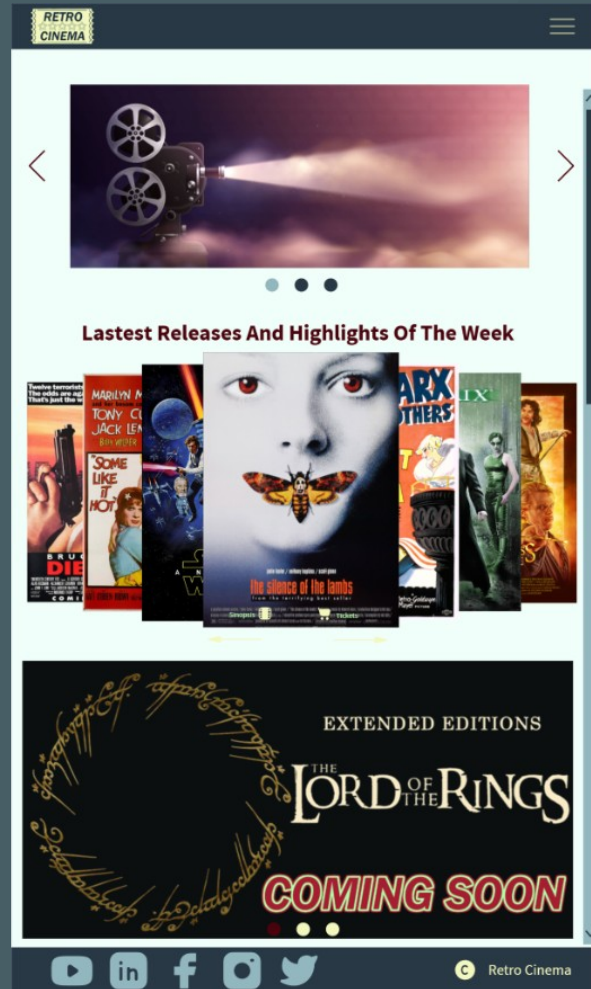

The product:

I create a website to attract customers and build customer loyalty. I create a web that offers certain things that will improve the customer experience, thus increasing customer satisfaction.

Duration of the project:

From February 2025 to April 2025

Project summary

The problem:

Buy online tickets for a cinema

The objective:

Create a website with new features that will also be added to the app.

Project summary

My role:

UX designer in charge of creating a Retro cinema website from conception to delivery.

Responsibilities:

Conducting interviews, paper sketches, prototypes (lo-fi and hi-fi), accessibility and design iteration studies.

Understanding the user

- User research: summary
- User research: weaknesses
- Personas
- Problem statements
- User journey map

User research: summary

I conducted the interviews and made the empathy maps, all to understand the needs of the users. The group of users were of different ages and needs, but with a passion for this type of games, but limited time. These users, through the research, revealed why it was important for them to reserve a place, an area or arcade machines. As well as the advantage of having an app and not just a website.

User research: weaknesses

1

Time

Working people
don't have much
free time

2

Not being able to shop
on the web

Many people need to
plan ahead, so not being
able to buy tickets online
is an inconvenience.

Persona: Gauthier

Problem statement:
Gauthier is an editor that needs to be able to buy the tickets in advance on the website because she has a little time.

USER PERSONA 1

GAUTHIER MIGNEAULT

AGE	25
GENDER	Female
COUNTRY	France
EDUCATION	college
OCCUPATION	editor
CIVIL STATUS	single

ABOUT

I have always been attracted to cinema. I especially like to see how stories are told in different ways at different times. All the different eras have their touches in it.

GOALS

- be able to purchase the ticket online
- be able to choose a seat on the website

FRUSTRATIONS

- little time, not usually in time to get a good spot.
- having to wait in long queues to buy the ticket

“Go to the cinema to enjoy it alone.”

Persona: Tristan

Problem statement:

Tristan is a programmer that needs to be able to shop the tickets on the website because he needs to plan ahead.

USER PERSONA 2

TRISTAN BOULÉ

AGE	55
GENDER	Male
COUNTRY	France
EDUCATION	college
OCCUPATION	programmer
CIVIL STATUS	married

ABOUT

From the time I was a child going to the cinema with my mother until now I have never stopped loving it. Now I like to relive films with my lifelong friends.

GOALS

- Buy your ticket and reserve your seats on the website.
- Watch trailers of the films on the website

FRUSTRATIONS

- not being able to shop on the web and therefore not being able to plan in advance

“Getting together with friends and enjoying films from long ago is a joy.”

User journey map

Tristan 's journey map showed shows how useful it would be to buy cinema tickets in advance.

Persona: Tristan

Goal: plan a afternoon with his friends to watch a film

ACTION	Choosing the date	Check availability of arcades	Meet with friends and go together	Park the car and enter	Arriving at the arcade
TASK LIST	Tasks A. See the dates they have free time B. Select the best date	Tasks A. see which films are of interest to them B. choose one and one session C. select the seats and pay them	Tasks A. meeting his friends some time before the film start B. go to the cinema	Tasks A. walk to the entrance of the Retro cinema B. buy some food and drinks	Tasks A. show the tickets and enter the cinema B. sit in their rightful seats
FEELING ADJECTIVE	Overwhelmed Annoyed	Hopeful	Satisfaction Nervousness	Alert Glad	Excitement Nervousness
IMPROVEMENT OPPORTUNITIES				The cinema should have a car park	

Start the design

- Page sketches on paper
- Digital page layouts
- Low-fidelity prototype
- Usability studies

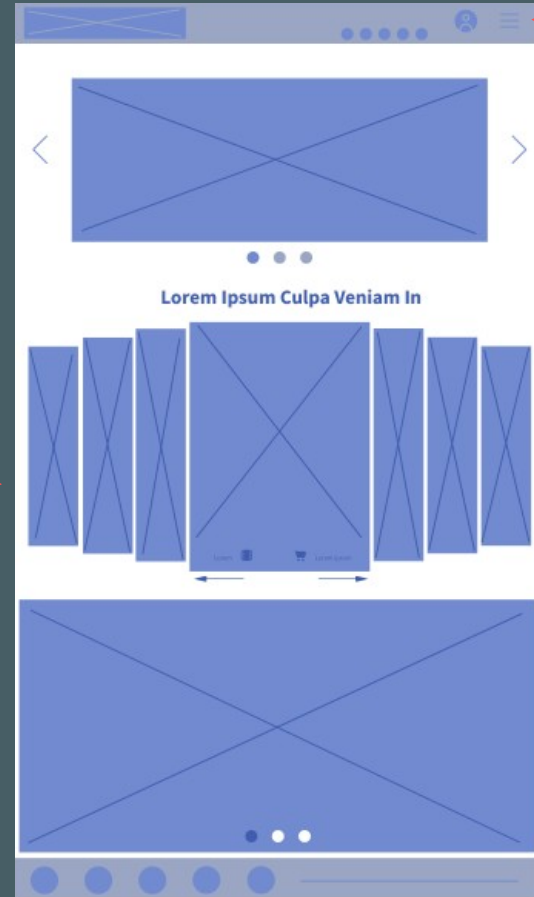

The time it took to do the various iterations on paper for each screen meant that the digital layouts were more accurate afterwards. Simplicity and speed were prioritised to avoid confusion for users.

Digital page layouts

I tried to make the homepage simple, but attractive.

Carousel of images

main burger-style menu

Digital page layouts

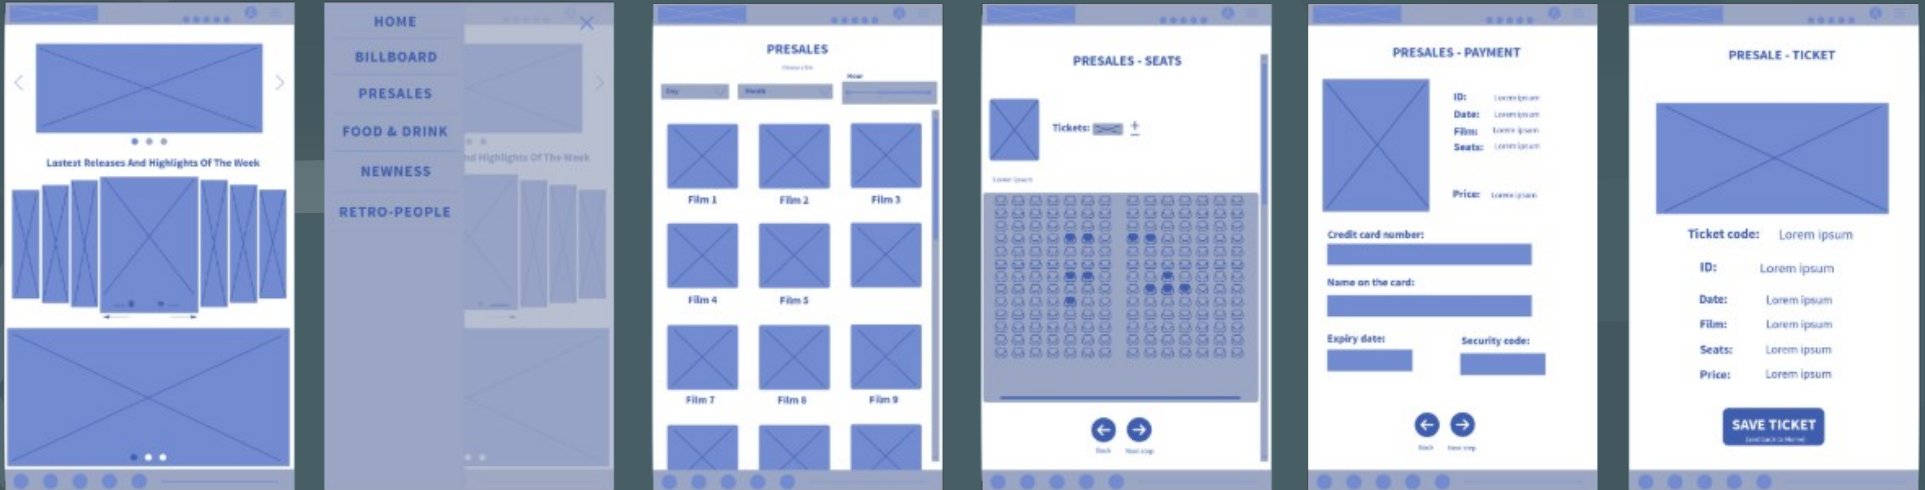

I tried to make the designs based on the results of the user research.

Low-fidelity prototype

I created a lo-fi prototype making use of digital page layouts. The user flow I plugged in was to buy tickets for a film.

See the lo-fi prototype here.

Usability study: Findings

The idea is to buy a ticket for a film for a certain day and hour in the website

Round 1 Discoveries

- 1 The users need simple menus
- 2 Some of them need simpler way to select seats
- 3 Some users have trouble finishing the payment

Round 2 Discoveries

- 1 Some users with problems navigating in mobiles need more accessibility
- 2 More minimalist and less content in certain menus

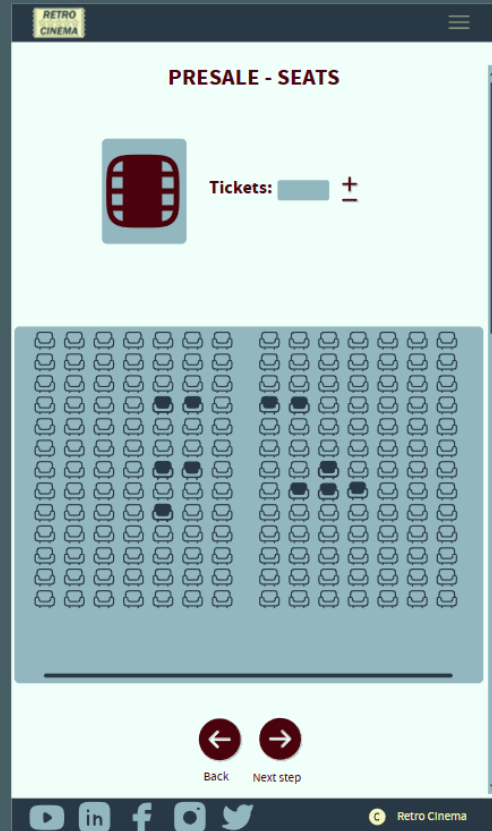

Refine the design

- Mock-up
- High fidelity prototype
- Accessibility

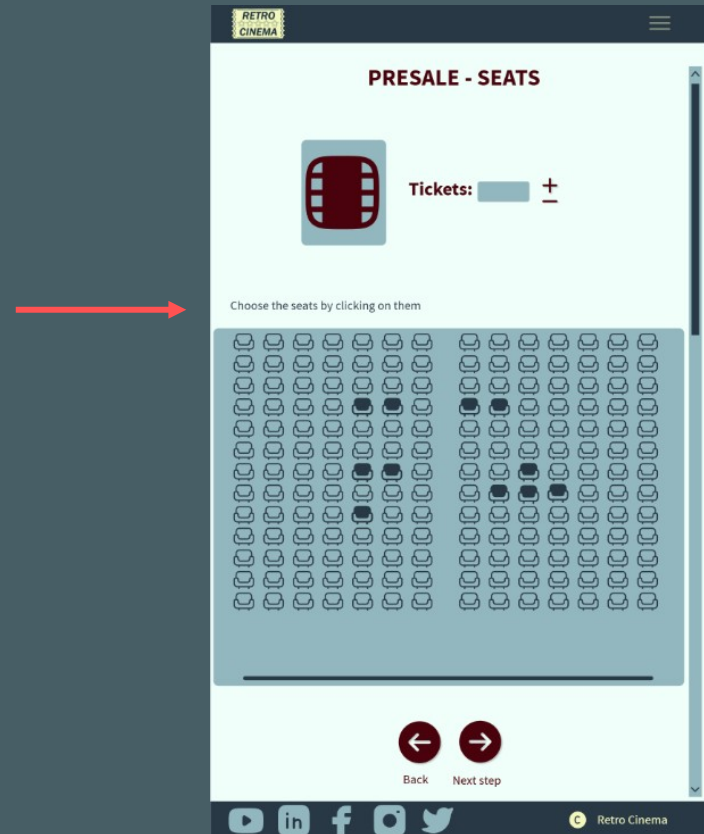

Mock-up

I put explanatory text to facilitate the process for people for whom it was not intuitive what to do.

Before the usability study

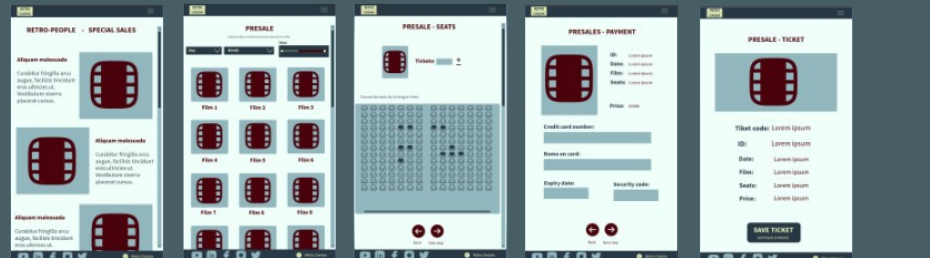

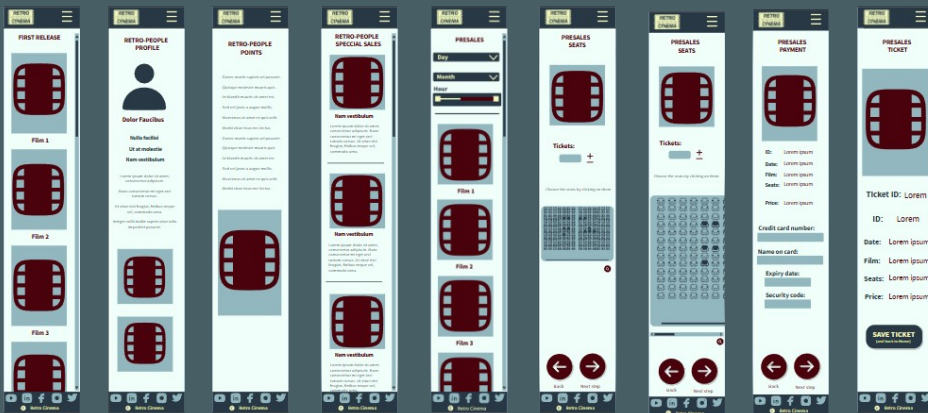

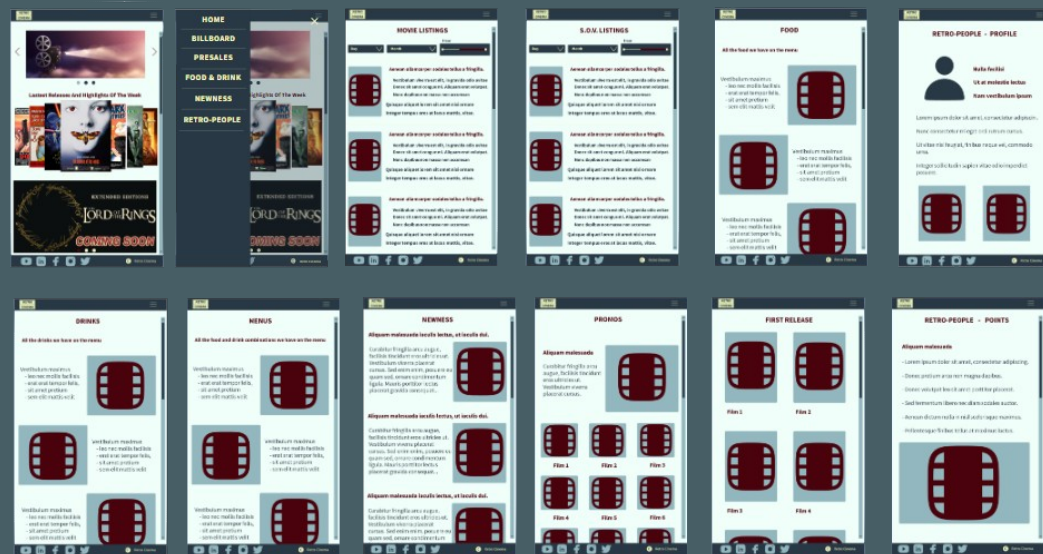

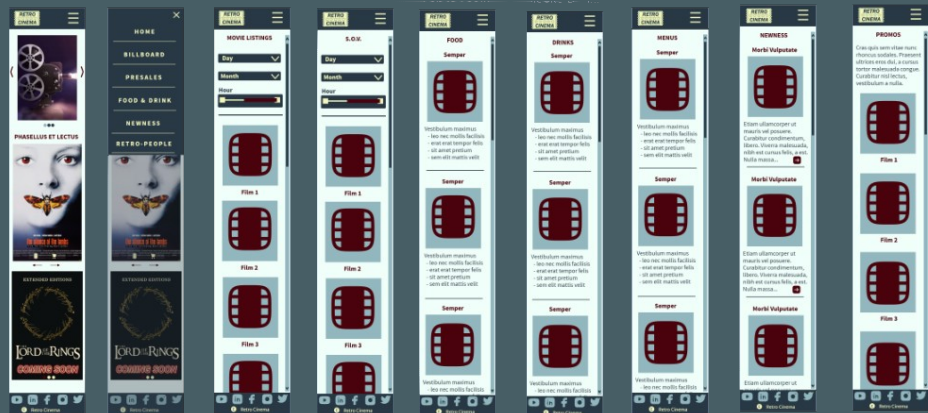

After the usability study

Mock-up

Mobile version

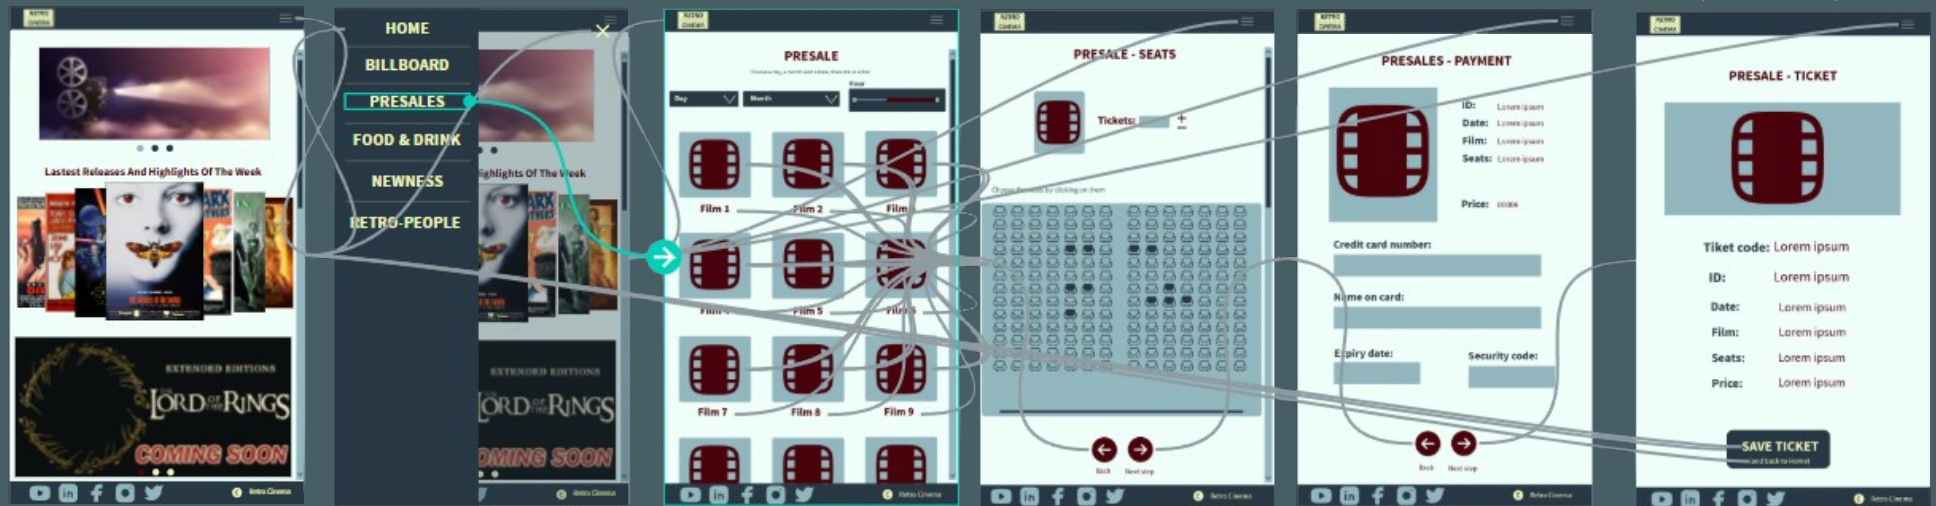

Desktop version

High fidelity prototype

The flows of the hi-fi prototype are simple and easy to follow. Making it an enjoyable experience.

See the hi-fi prototype here.

Accessibility considerations

1

The font used was one that was comfortable for everyone to read.

2

Icons were simplified to make the app easier to navigate, as well as a more minimalist and simple design.

3

Intuitive and minimalist design, for easy navigation

The background of the slide is a solid red color. It is decorated with a pattern of hexagons. On the left side, there are large, semi-transparent red hexagons. A thin black vertical line is positioned to the right of the 'Go to' text. On the right side of the slide, there is a dense pattern of smaller, outlined hexagons in various shades of red and white, creating a complex geometric texture.

- Conclusions
- Next steps

Conclusions

Impact:

The addition of being able to buy tickets online means that customers can organise their time well and avoids disappointment and inconvenience.

What I learned:

What one thinks is simple and easy to understand is not always simple and easy to understand for everyone.

You may have ideas that sound great to implement, but as you iterate, you realise that this is not the case.

Next steps

1

Check that users' needs are met

2

Continue iterating and doing usability studies, to refine the final design.

3

Check whether customers would benefit from a dark mode or a colour range for colour blindness.

Let's get in touch!

Thank you for taking the time to review this project. I'll give you my contact information below, in case you need to see more of what I've worked on or get in touch.
